It took me months to decide whether to get this one or Kapit and Elson's coloring book. I tried a couple of coloring in Kapit's but I finally settled on this one, and am very pleased. I prefer this book - the book is well organized, the main points (key words) are bolded. The text is MUCH clearer. The information about muscle origin, insertion, innervation, action are neatly organized into tables. There are a couple of other tables as well - Ligaments and attachments, features and characteristics for various organ systems....etc. The images are much clearer and less busy.

While it's true that the margins of each anatomical feature are not as well delineated as Kapit's book, I find this to be less important, since in the body (cadaver or real) there isn't necessarily a line to separate out the features anyways. You can always double check with your anatomy book or an atlas. Some of the features are only named by number on the coloring page, which I use as a quiz for myself. Overall, great addition for studying anatomy! Thank you Dr. Hansen. Happy Coloring!

By mc304 This was purchased as a gift for my sister who is currently enrolled in a Sonography program at her university and is taking Anatomy classes. She really liked receiving it as a gift and has noted that not only is it a way to make studying more pleasant and enjoyable, but it is filled with great information! What a neat way to help relieve stress while studying and learning. I would highly recommend this as a unique gift for anyone who is looking to purchase a gift for someone in a program at school that requires them to learn anatomy. This is a high quality item too..not a flimsy or cheap book. Highly recommended!
